

# **SPEAKING OF TALKING MACHINES**

## **PRACTICAL EXAMPLE ON THE APPLE II PERSONAL COMPUTER**

With the improvement of the average life expectancy and the increasing number of machines available at low or medium prices it is now unthinkable not to believe the need for a virtual assistant (artificial intelligence Chatbot). hospitalization, always having a nurse available can be impossible, but by supporting her with a virtual assistant or robot many of these problems would be solved. Even in a simple family or for pure fun or entertainment or need to free the home library a chatbot becomes indispensable.

After talking about the need we may have of a virtual assistant, we now approach how to make one of our own, with sentences we have written or copied here and there.

So let's take our notepad from Windows and write the following sentences:

```
1  PR# 3: HOME : PRINT
"-----
----": PRINT "                      TINA"
2  PRINT "                      "
3  PRINT "                      RANDOM MULTIPLE ANSWER INTERACTIVE"
4  PRINT "                      CHATBOT"
5  PRINT ""
6  PRINT "                      DEVELOPED BY"
7  PRINT ""
9  PRINT "                      MATTEO TREVISAN AKA TOOLKITMAN": PRINT
"-----
----": FOR I = 1 TO 5000: NEXT I:
```

Here we will first of all present our Chatbot with the PRINT "" command and putting "" the phrase we like best, example

RANDOM MULTIPLE ANSWER INTERACTIVE headed CHATBOT etc.

Then we will move on to cleaning up the screen and giving the writing speed with the following commands:

```
HOME : SPEED= 150
```

the following step and let us recognize with the next string:

```
10  PRINT "": PRINT "TINA READY TO CHAT...": PRINT
"-----
```

```
----": PRINT "TYPE YOUR NAME PLEASE": INPUT A$: GOTO 333
```

Then we will write what is the randomness with which the questions arise and we should indicate how many are with a corresponding number and a random command:

```
11 J = INT (100 * RND (1)) + 1:
```

When we are going to write all the following questions within an expression:

```
20 B$ = "TINA>": IF J = 1 THEN PRINT B$;"ARE YOU OK?": PRINT A$: INPUT ">";F$:
GOTO 135
21 B$ = "TINA>": IF J = 2 THEN PRINT B$;"ARE ELECTION NEXT YEAR?": PRINT A$:

```

This way our chatbot will be able to ask and answer yes or no.

Then, if we wanted to, we could add a simple drawing in GR graphics in this case:

```

333 GR
334 COLOR= 8
335 HLIN 5,27 AT 8
336 VLIN 5,27 AT 6
337 HLIN 5,27 AT 23
338 VLIN 27,5 AT 26
339 COLOR= 12
340 PLOT 7,10
341 PLOT 16,22
342 PLOT 25,10: GOTO 11

```

If we want to copy and paste the following code from notepad to Applewin simply once copied from notepad we press SHIFT Insert on the keyboard after resetting Apple ii. We can first modify the sentences "" to our liking.

To re-write it to disk we should have previously loaded DOS 3.3 and copied and pasted from notepad and then written to the INIT prompt (program name).

Complete Code:

```
1  PR# 3: HOME : PRINT
"-----"
----": PRINT "                                TINA"
